

Create a new, require a
uniquely username

A mobile application registration form displayed on a smartphone screen. The form includes three input fields: 'Name:', 'Gender:', and 'Age:'. At the bottom of the form is a 'Create' button. A line from the title points to the 'Name:' field, and another line from the bottom text points to the 'Create' button.

Name: _____

Gender: _____

Age: _____

Create

If the username already
exist then give the
message

Create a new username,
system create new user
And system load in to main
screen
